

## General Description

The LTA8151, LTA8152 and LTA8154 (LTA815x) are a family of zero-drift, micro-power, rail-to-rail output operational amplifiers capable of operating on wide supplies ranging from  $+4.5\text{ V}$  ( $\pm 2.25\text{ V}$ ) to  $+48\text{ V}$  ( $\pm 24\text{ V}$ ). The LTA815x op-amps use Linearin's proprietary auto-zeroing techniques to offer outstanding dc precision and ac performance, including low offset voltage ( $30\text{ }\mu\text{V}$  maximum), near zero-drift over time and temperature, 1 MHz bandwidth, and  $0.41\text{ }\mu\text{V}_{\text{PP}}$  input voltage noise at 0.1 Hz to 10 Hz. These high-precision, low-quiescent-current op-amps offer high input impedance and rail-to-rail output swing within 10 mV of the rails. The input common-mode range includes the negative rail.

The single version LTA8151 device is available in micro-size MSOP-8L, SOT-23-5L, and SOIC-8L packages. The dual version LTA8152 device is offered in MSOP-8L and SOIC-8L packages. The quad version LTA8154 device is offered in SOIC-14L and TSSOP-14L packages. All versions are specified for operation from  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ .

## Pin Description

| Symbol  | Description  |
|---------|--|
| -IN     | Inverting input of the amplifier. The voltage range is from $V_{S-}$ to $V_{S+} - 1.5$ V.  |
| +IN     | Non-inverting input of the amplifier. This pin has the same voltage range as -IN.  |
| + $V_S$ | Positive power supply. The voltage is from 4.5 V to 48 V. Split supplies are possible as long as the voltage between $V_{S+}$ and $V_{S-}$ is from 4.5 V to 48 V.                    |
| - $V_S$ | Negative power supply. It is normally tied to ground. It can also be tied to a voltage other than ground as long as the voltage between $V_{S+}$ and $V_{S-}$ is from 4.5 V to 48 V. |
| OUT     | Amplifier output.  |
| NC      | No connection  |
